

CLI Wizard

Copyright 1988, Merlin's Software

For questions and support for **CLI Wizard**, direct
your calls and correspondence to the author:

Merlin's Software
J.L. White
1034 Four Seasons Blvd.
Tampa, FL 33613
(813) 971-4451

Through the courtesy and cooperation of **Merlin's Software**, your *AIR* drive includes the new **CLI Wizard** software at no additional charge.

CLI Wizard allows you to perform many complex tasks from it's user-friendly menu rather than memorizing the CLI commands required to do the same task. We are confident you will find it to be a valuable addition to your Amiga software library.

Installing CLI Wizard

Before using your **CLI Wizard** program, a few simple steps are required to make a bootable **CLI Wizard** disk.

- Make a **DISKCOPY** of your current Workbench disk.
- Remove all unnecessary files and drawers such as **DEMOS**, etc. to make room for the **CLI Wizard** files.
- Set your Preferences on the new disk you just created, then remove the Preferences program from the disk. (Again to create more free space for **CLI Wizard**).
- Insert your original **CLI Wizard** disk in df0:, your new disk in df1:. Open a CLI window and execute these two commands:
COPY DF0:C TO DF1:C
COPY DF0: TO DF1:
- You have now created a bootable **CLI Wizard** diskette. Use and enjoy. To read the on-disk documentation, *double click* on the **WIZARD.DOC** icon.
